Frontend Design Ideas and Drafts

Stage 1 and first Drafts:

Homepage / Dashboard (Vision page)

This will either be a homepage with different boxes and or a scrollable version

- **Image Classification card (Stage 1 active)**
    - Upload box preview
    - Clickable → opens full classification page with BDD coverage
- **Model Versions card (Stage 2 future)**
    - List of model versions (stable, canary, archived)
    - Ability to rollback and pick the specific versions
- **Live Metrics card (Stage 3 future)**
    - Charts for latency, requests, error rate
    - Stable vs canary
- **System status bar (future)**
    - Edge/cloud traffic split
    - Engine health indicators

Integrated BDD Scenarios

- Image upload (drag & drop + file picker)
- Live image preview after upload
- “Classify Image” button
- Results panel showing metadata:
    - Predicted label
    - Confidence score
    - Model version
    - Inference latency
    - Request ID
    - Timestamp

IDEAS from the meeting

- Main homepage with four cards you can click on
    - Image classification with most recent image shown maybe
    - Models and redeployment section on model section/page and what model is currently active
- Monitoring page with basic metrics on the homepage
- Settings section either on Homepage or as section in drop down menu

- Have a dashboard to flick through sections
- They all have their own pages
- Recent images section
- AVOID making it too covered and too much info
- Settings section where each user can fine tune it for their purpose and how it should work.

Extras:

- Have a section with users to pick projects before clicking onto the homepage so they can customise them each
- For example you need different sections for black and white and some coloured and that helps for each project
